

Ping Error

1. Destination Host unreachable:-

we ping destination IP address from PC1 (Source device). In that PC1, ~~no route~~ NO destination IP address in Route table.

2. Request timed out.

In PC1 (Source device) have destination IP address in route table it will reach destination device. But in destination device "route table not have source device IP address" it will show request timed out.

3. TTL expired.

we have more 127 connecting device it will show TTL expired. for example in between source device to destination device more 127 device connect it will show TTL expired. in loop connection also sometime we are will show TTL expired.
